

PLASTIC AND

SEABIRDS

99%

of seabird species
could ingest plastic by
2050

15%

of a chick's bodyweight
can be plastic

100%

of seabird chicks in
some regions can
have plastic in their
stomachs

450

pieces of plastic were
found in a single Laysan
Albatross chick

32x

is the increased chance of
death from ingesting a
balloon versus a hard
plastic

Seabird nests

may contain or be entirely
built with plastic

20.4%

is the lifetime chance of mortality from ingesting just a single
piece of plastic
